

$X_0 \leq 44.5$
loss = 2896.81
num_sample = 109

```
graph TD; A["X_0 <= 44.5<br/>loss = 2896.81<br/>num_sample = 109"] --> B["value: 83.706<br/>num_sample = 17"]; A --> C["value: 127.141<br/>num_sample = 92"];
```

A decision tree node diagram. The root node is a rectangle containing the text 'X_0 <= 44.5', 'loss = 2896.81', and 'num_sample = 109'. Two arrows point from the bottom of this node to two child nodes. The left child node is a rectangle containing 'value: 83.706' and 'num_sample = 17'. The right child node is a rectangle containing 'value: 127.141' and 'num_sample = 92'.

value: 83.706
num_sample = 17

value: 127.141
num_sample = 92
